(line numbers may be approximate) :-)

line 248 add "one or more" enforcement mechanisms)

340 change "may" to "might"

350-355 should be a numbered list

358-367 should be a numbered list

early in section 5 describe the behavior the sets of related attributes,
like firmware/resident/user application, etc.

firmware versions should be organized by 4-tuples

in security considerations, reference NEA
look at security considerations in the RFC

work with the SC to see how to make this more visible, maybe with Anne Price
at TCG

1139-1142 fix the reference for IDS attributes (since we're updating IDS
attributes)
